

Logscape at Rabobank

Logscape was introduced into Rabobank 5 years ago, it is currently deployed across 14 teams and used to measure everything from business KPI's, to real time applications while also offering alerts and automation.

Working with the Rabobank grid was originally causing a significant loss in productivity due to the time and effort spent diagnosing, debugging and fixing issues. Logscape was suggested and was the perfect solution. Introducing Logscape allowed teams to consolidate their logs, and search for specific errors. Allowing teams to become much more productive and proactive when dealing with errors, the complete visibility of the logs allowed issues to be predicted, meaning changes were no longer only reactive in nature. With the time saved during the debugging process, Rabobank were able to dedicate more time to increasing productivity with their platform.

Summary

- Brought into Rabobank 5 years ago
- Deployed across 14 teams
- Measures business KPI's, performs real time application monitoring as well as real time alerting.
- Allowed teams to search for, and locate - Specific errors.
- Logscape provides full stack visibility,
- Visibility from operating system, to grid application logs.

“Logscape was the perfect solution”

- Richard Munroe, Rabobank Head of Grid
